Team SolarSizer

SolarSizer AI: turns one plain sentence into a right-sized solar system for small Nigerian shops that run on petrol generators

BRIEF
7 Replace diesel for productive use

TRACK

HOW THIS PITCH IS SCORED

Impact	25%
Innovation	25%
Sustainability	25%
Feasibility	15%
Scalability	10%

IMPACT · 25% OF SCORE

Small shops can swap petrol for right-sized solar

THE PROBLEM

Small shops in Nigerian cities run petrol generators when the grid fails. Buying solar is guesswork: systems end up too small or too big, so many owners keep buying fuel.

More than 655 million people worldwide live without electricity.

1,300 L

petrol not burned a year (modelled, one example shop)

₦25k → ₦0

petrol a week, if solar replaces all generator use

3.0 t

CO_2 avoided a year, and ₦1.3M saved a year

Judges look for: a large, quantified benefit to the people in the brief, backed by real data and the brief's impact metric.

INNOVATION · 25% OF SCORE

A neutral check before you buy solar

TODAY

Installers quote different systems, and buyers have no way to check them. Calculators expect technical inputs.

OUR APPROACH

Describe your appliances in plain words. AI reads the list, and tested formulas do all the maths.

ROOT CAUSE WE ADDRESS

Buyers have no neutral, location-based way to check a quote.

HOW IT WORKS

1. Describe what you power, and edit the list the AI reads
2. Formulas size the system using NASA sun hours
3. See cost, payback and petrol saved. Share on WhatsApp

Judges look for: a genuinely new approach that addresses a root cause existing solutions miss, not a copy of what exists.

SUSTAINABILITY & AFFORDABILITY · 25% OF SCORE

The instalment ends. The petrol bill does not

COST TO THE USER

₦115,629 / mo

₦243,000 down, 24 months (example terms). Petrol today: ₦108,333 a month. Placeholder prices.

PAYBACK

About 23 months

WHO PAYS

The app is free for shops. They buy the system in cash or monthly. Installers would pay per sizing request.

HOW IT PAYS FOR ITSELF

Planned per-request fees from installers and pay-as-you-go firms cover running costs. Not yet tested.

WHO KEEPS IT RUNNING

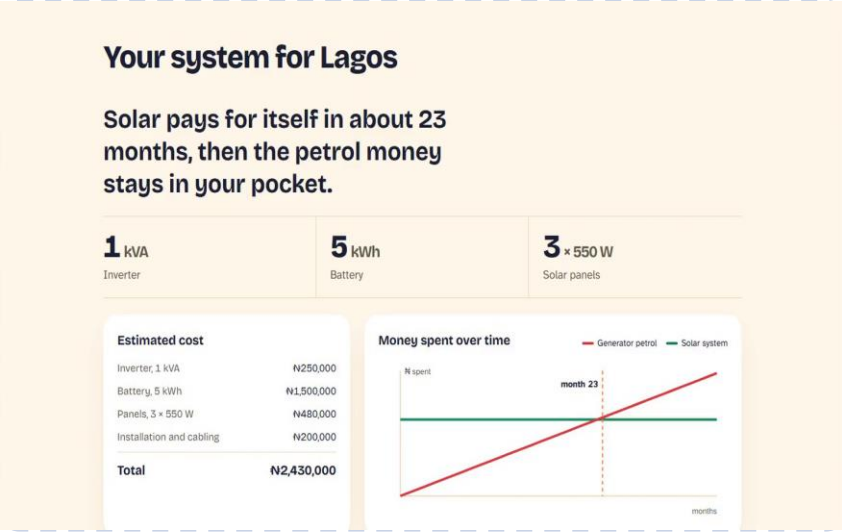

Local installers maintain each system. Partners would update prices monthly.

ENVIRONMENTAL BENEFIT

About 1,300 L of petrol and 3.0 t of CO_2 avoided a year for the example shop.

Judges look for: a solution that pays for itself, is affordable to the lowest-income users, is maintainable locally, and lowers environmental impact.

A live prototype with a clear path to pilot

EVIDENCE IT WORKS

- Live site with NASA data; 35 browser tests pass
- Prices are placeholders; no partners signed yet
- Top risk: wrong prices; test with real quotes

PATH TO SCALE

PILOT

50 Lagos shops with installer partners

EXPAND

All Nigerian states, more installers

SCALE

Kenya, Ghana: swap cities, prices, currency

OUR ASK

One installer partner, one pay-as-you-go partner, and a mentor for our pilot

Judges look for: a working prototype on real or realistic data, a clear path to a pilot, and a plan to replicate with costs that fall at scale.
